Application Security Services

Manage Digital Risk Intelligently

Applications are built to enable valuable business processes, so their security must be confidently secured. And with increasing cyber threats and stricter privacy laws, applications need to be fortified with the best protective measures possible. Often, however, security is added almost as an afterthought (if at all) and when software is developed by an outsourcer hidden holes, malware and back doors can be extremely difficult to detect, exposing the application data and customers to a wide range of possible exploits.

SiegeWorks is a leading global enterprise security services firm that helps clients plan, design, and build smart, flexible and scalable digital asset protection solutions. Experienced consultants help enterprises rid their applications of design, coding, and delivery vulnerabilities.

Why SiegeWorks?

SiegeWorks Application Fortified Enterprise (SAFE™) methodology utilizes award-winning procedures and best practices techniques. The approach assures professionalism, commitment and ROI for more than 400 clients internationally. Consultants and engineers bring years of experience with complex database and application security implementations.

SiegeAPP Application Security Services

SiegeWorks International Services Group (ISG) guarantees strategic risk mitigation through SiegeAPP™ Application Security Services.

SiegeAPP Assessment:

SiegeWorks consultants fix vulnerabilities and improve development practices. Services for off-the-shelf and customized applications include:

- Audits
- Vulnerability Assessments
- Deep Penetration Tests
- Code Reviews & Tracing
- Discovery of Insecure Coding Practices

SiegeAPP Design & Development:

Experts work with the enterprise team to design and develop secure applications aligned with business needs and IT requirements. Remediation and custom coding is offered for enterprise and Web applications, databases, and wireless applications.
